

Ergo F ESD

Built for high-tech environments.

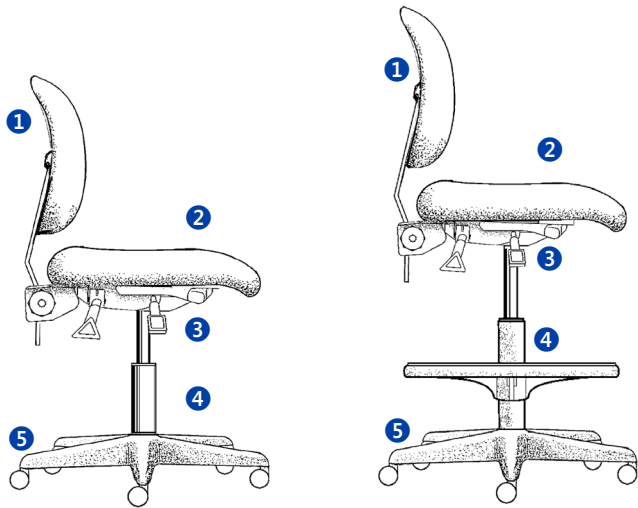

The ergo F ESD series provides the comfort of foam-fabric/vinyl chairs combined with the dependable performance of ergoCentric ESD seating. To allow electrical charge to pass through the chair, conductive fabric/vinyl is secured to copper bands within the seat where metal T-nuts are installed on the copper bands. Metal screws are used to connect the mechanism to the T-nuts which allows the charge to continue through the entire down to the conductive floor.
